

ABSTRACT OF THE DISCLOSURE

1
2 A nonstaining ink (or inkless) fingerprint
3 composition and applicator comprises two nonpermeable
4 foil strips, made of Mylar, for example, having the same
5 width with one strip being slightly longer than the
6 other. A thin layer or coating of an inkless (or
7 nonstaining) fingerprint composition is sandwiched
8 between the superimposed foil strips leaving a small
9 border including a small area at the end of the strips
10 free of the composition. The inkless composition which
11 includes a color former and may or may not include a
12 developer is in a semisolid state and room temperature
13 and in a liquid state at about 110°F and above.
